Doctors on the move need tech that keeps up

Doctors are frustrated with time spent on clinical documentation and how it cuts into patient care – 88% report being moderately to severely stressed.

Overwhelmed by documentation

of a doctor's workday is spent on data entry

Cloud-based dictation is an antidote to burnout. It helps doctors feel better about documentation, more satisfied and freer to practice as they see fit.

A call for portability

12,138 steps

patient data

is a key priority

Doctors already use mobile phones for

everyday tasks and are looking to make

clinical documentation more portable too.

are taken by the average healthcare

professional per day, 2.3 times

more than the typical American

mobile device to communicate

of doctors use a personal

of CIOs say portability

Doctors that use clinical speech recognition are 23% happier

They feel more confident about technology and have a better experience

They move freely, spend more time with patients and can go home on time

The cloud delivers

When doctors use cloud-based dictation, documentation becomes portable and astoundingly fast.

of doctors using the cloud choose to dictate on a mobile device

3X faster

than typing on a computer, dictation averages 150 words per minute

2.5 hours saved for every hour dictated
